

Zero

Thirty Wall

Design by: Samuel Wilkinson

UK-based designer Samuel Wilkinson created the Thirty wall fixture, which we predict will be angling its way into the projects of architects and lighting specifiers with increasing frequency! When mounted, the rotating light fixture—perfect for ceilings or walls—can be turned 170 degrees to better angle its pool of light. The microprisma diffuser softly and evenly filters these pools of luminescence to create an asymmetrical geometric shape with no hotspots. It's available in black and white, the latter matching its playful constitution.
